

VAMSHI RAMAVATH

West Haven, CT | +1-216-694-8703 | vamshiramavath15@gmail.com | github.com/rvamsh98 | tryhackme.com/p/Student98

Open to remote work (U.S.) – Available for 24/7/365 Tier 1 rotating shift schedule

PROFESSIONAL SUMMARY

Reduced false-positive security alerts by 40% while maintaining 85% true-positive accuracy – hands-on Tier 1 Security Operations Center (SOC) and Cybersecurity Incident Response (CIRT) experience spanning 1.5+ years. Monitors work queues, triages EDR and Snort IDS alerts, and identifies network intrusions using Splunk and Microsoft Sentinel (SIEM), collaborating with senior/Tier 2 analysts on complex investigations. Applies MITRE ATT&CK, Cyber Kill Chain, and NIST frameworks, plus Azure cloud security fundamentals and AI-assisted tools to accelerate threat monitoring. CompTIA Security+ certified.

CORE QUALIFICATIONS

Tier 1 SOC & Incident Response (CIRT): Work queue monitoring, EDR and IDS/IPS alert triage (Snort), network intrusion identification, threat response and escalation per SOPs/SLA windows, collaboration with senior/Tier 2 analysts

SIEM & Detection Engineering: Security Information and Event Management (SIEM): Splunk, Microsoft Sentinel; Snort IDS rule authoring, MITRE ATT&CK mapping, false-positive tuning, network analysis and log correlation

Cloud & Network Fundamentals: Azure cloud security fundamentals (TryHackMe), TCP/IP, DNS, HTTP/S, ports and protocols, Windows Server & Linux (Ubuntu, CentOS)

AI-Assisted Security Workflows: AI-assisted tools for threat research and documentation (TryHackMe AI Security), workflow automation, ServiceNow ticketing with SOAR-style automated routing

Threat Analysis Frameworks: MITRE ATT&CK, Cyber Kill Chain, and NIST-aligned analysis (coursework exposure); Digital Forensics coursework (Intro to Cyber Forensic Science – A grade)

Investigation & Communication: OSINT and sandbox-based phishing investigation, root-cause analysis, clear written incident reporting and technical documentation

Certifications: CompTIA Security+ (Active) • CompTIA Network+ (In Progress) • TryHackMe Azure & AI Security (Completed) • Google Cybersecurity Professional Certificate

PROFESSIONAL EXPERIENCE

IT Cybersecurity Analyst Intern

Jan 2026 – Present

KGS Technology Group

- Monitor work queues and triage EDR and Snort IDS alerts across endpoint and network devices, assessing validity and scope before escalating confirmed threats per SOPs and SLA windows.
- Perform root-cause analysis on flagged activity, correlating log sources to confirm malicious behavior and determine appropriate escalation path.
- Document triage details, technical findings, and remediation actions in ServiceNow for audit-ready incident recordkeeping.
- Led peer training for new technicians on investigation, escalation, and documentation procedures, improving onboarding consistency.

Cybersecurity Analyst

Aug 2022 – Dec 2023

SVS Enterprises

- Monitored and investigated security alerts across endpoint, firewall, IDS/IPS, and email gateway sources in a 24x7 SOC using Splunk and Microsoft Sentinel, correlating data to distinguish true positives from false positives under SLA-driven timelines.
- Investigated phishing emails and malicious domains/URLs/IPs using OSINT and sandbox analysis tools, documenting findings and remediation recommendations in clear incident reports.
- Authored 26 custom Snort IDS detection rules mapped to MITRE ATT&CK, reducing false-positive alerts by 40% while maintaining 85% true-positive accuracy through iterative tuning.
- Owned alert triage from detection through resolution for lower-severity incidents while collaborating with senior/Tier 2 analysts on high-severity investigations, tracking event status and business impact.

TECHNICAL PROJECTS

Office 365 Credential Harvesting Phishing Investigation – github.com/rvamsh98/phishing-email-investigation

- Investigated a real-world credential harvesting campaign end to end – analyzed email headers/DKIM-DMARC, traced a malicious redirect chain via URLScan.io, mapped attacker technique to MITRE ATT&CK T1566.001, and documented a full case report.

EDUCATION & CERTIFICATIONS

Master of Science in Cybersecurity & Networks

Jan 2024 – May 2026

University of New Haven, CT

Relevant coursework: Computer Networks & Data Communication (A-) • Operating Systems (A) • Intro to Computer Security (A) • Ethical Hacking & Penetration Testing (A-)

Bachelor of Technology

Graduated: May 2022

SIET, JNTUH
