Summary

Information Security professional with hands-on experience in security monitoring, incident detection, and threat-informed defense through self-directed SOC lab projects. Designed and implemented a Splunk-based SOC dashboard integrating Snort and Sysmon, analyzing **10,000+ security events** and developing **26 custom detection rules** mapped to MITRE ATT&CK techniques and MITRE D3FEND countermeasures. **CompTIA Security+ certified**, with a strong foundation in NIST and CIS frameworks and practical skills in SIEM operations, alert triage, and log analysis. Brings an engineering-driven approach to problem solving, enabling structured analysis, rapid learning, and disciplined documentation in 24x7 SOC environments.

Education

University of New Haven, West Haven, CT
Master of Science in Cybersecurity & Networks

Jan 2024 – May 2026

Experience

Cybersecurity Intern, Police Station, India

Nov 2022 – Aug 2023

- Assisted in cybercrime and security investigations by collecting, reviewing, and organizing system logs, digital evidence, and incident details.
- Supported threat intelligence and OSINT research to identify Indicators of Compromise (IoCs) relevant to active cases.
- Helped analyze suspicious network and system activity using basic monitoring tools and open-source utilities under supervision.
- Contributed to incident documentation and reporting, improving accuracy and completeness of case records for audits and reviews.
- Assisted in maintaining cybersecurity documentation and inventories using Excel and Word to improve operational tracking.
- Supported the review and development of internal security procedures aligned with best practices and compliance guidelines.

Projects

Threat-Informed SOC Dashboard using Splunk, Snort, and Sysmon (MITRE ATT&CK + D3FEND)
Self-Initiated Project

- Designed and implemented a virtual SOC lab in VMware integrating Splunk Enterprise (SIEM), Snort (network IDS with 26 custom detection rules), and Sysmon (endpoint telemetry on Windows 10).
- Simulated real-world attacks from Kali Linux, ingesting and analyzing over **10,000 security events** to validate detection logic and multi-source correlation.
- Mapped detections to MITRE ATT&CK techniques and corresponding MITRE D3FEND countermeasures for threat-informed analysis and response.
- Built interactive Splunk dashboards providing unified visibility into adversary tactics, alert triage, and recommended defensive actions.
- Automated log analysis and reporting using Python (pandas) to parse exported Splunk data, summarize top alerts and techniques, and generate Markdown summary reports.

Skills

- **Scripting & Programming:** Python (automation, log parsing), C (basics)
- **Threat Intelligence & Hunting:** OSINT, Threat Hunting, IoC Analysis
- **Security Technologies:** SIEM, IDS/IPS, Firewalls, EDR/XDR, VPNs
- **Operating Systems:** Linux, Windows
- **Security Tools:** Splunk, Wireshark, Nmap
- **Frameworks & Standards:** MITRE ATT&CK, MITRE D3FEND, NIST, CIS, OWASP Top 10
- **Soft Skills:** Analytical Thinking, Problem Solving, Clear Communication, Documentation, Team Collaboration, Time Management

Certifications

- CompTIA Security+
