SUMMARY

Cybersecurity Analyst with hands-on experience in **SIEM management, security event monitoring, incident response, threat detection, and data loss prevention (DLP)**. Engineered detection pipelines processing **10,000+ daily security events** — achieving **85% true-positive detection** and **40% false positive reduction** via Splunk and Elastic Stack. Skilled in **IDS/IPS management, PCAP & network traffic analysis, Cyber Kill Chain, IOC identification, and MITRE ATT&CK-aligned threat hunting**. **CompTIA Security+ certified**.

TECHNICAL SKILLS

SIEM & Log Management: Splunk (SPL, correlation searches, alert tuning, dashboards), Elastic Stack (Elasticsearch, Logstash, Filebeat, Kibana), Microsoft Sentinel (KQL, analytic rules)

Threat Detection & IDS/IPS: Snort IDS, Sysmon, Wireshark, PCAP capture & network traffic analysis, Nmap, packet analysis, anomaly detection

Incident Response: Alert triage, IOC identification, malware analysis, timeline reconstruction, escalation workflows, playbook execution, root cause analysis

DLP & Email Security: Data loss prevention (DLP) alert triage, email header analysis, SPF/DKIM/DMARC validation, credential harvesting detection, URL sandboxing (URLScan.io)

Threat Intelligence: MITRE ATT&CK, Cyber Kill Chain, MITRE D3FEND, OSINT, threat hunting, TTP mapping, CTI, kill chain analysis, CIS Controls v8, NIST CSF

Cloud & OS Security: Azure (Microsoft Sentinel, Defender for Endpoint, Entra ID), AWS fundamentals, Windows security hardening, Linux (Ubuntu, Kali), Active Directory

Ethical Hacking (Blue Team): Kali Linux, Metasploit, BloodHound — AD attack path simulation, countermeasure validation, penetration testing support

Scripting & Tools: Python, Bash, Nessus (CVSS v3), Active Directory, TCP/IP, network protocols

PROJECTS & LAB EXPERIENCE

Threat-Informed SOC Monitoring & Detection Dashboard

Splunk Enterprise, Snort IDS, Sysmon, Wireshark, MITRE ATT&CK, D3FEND, Nessus, Kali Linux

[GitHub](#)

- Designed and deployed a 3-tier security monitoring environment (Kali attacker → Windows/Sysmon endpoint → Ubuntu SIEM) ingesting **10,000+ daily security events**; managed IDS/IPS-style detection across network and endpoint telemetry in a unified Splunk dashboard
- Engineered **26 custom Snort detection rules** mapped to MITRE ATT&CK (T1046, T1110, T1071, T1021) and Cyber Kill Chain stages; reduced false positives by **40%** while maintaining **85% true-positive accuracy** — directly improving analyst triage efficiency
- Developed SPL correlation searches aggregating **200+ alerts into 15 high-confidence attack patterns**; produced **25+ incident reports** with timelines, IOCs, malware indicators, ATT&CK mappings, and escalation decisions — aligned to enterprise SOC workflows
- Performed PCAP-based network traffic analysis using Wireshark to identify reconnaissance, brute force, and lateral movement patterns; validated Nessus High/Critical CVE findings with blue-team countermeasures aligned to CIS Controls v8

Real-World Phishing Incident Analysis & DLP Investigation

2026

URLScan.io, Email Header Analyzer, Wireshark, Windows Forensics, MITRE ATT&CK, IOC Extraction

- Investigated a **live 0365 credential harvesting phishing campaign** targeting the university network — performed DLP-style alert triage identifying sensitive data exfiltration attempt (credentials, PII) via Google Forms infrastructure, directly mirroring bank DLP analyst workflows
- Conducted email header forensics identifying **missing SPF/DKIM/DMARC validation** and **compromised internal sender account** (X-MS-Exchange-Organization-AuthAs: Internal); mapped full attack chain to **MITRE ATT&CK T1566** and **Cyber Kill Chain** delivery/exploitation stages
- Supported **25+ digital forensic investigations** at a law enforcement agency — reconstructed attack timelines via Windows registry, event log, and file system analysis; produced evidence-backed reports with IOCs and remediation actions used in active case investigations

AI SECURITY PRACTICE

TryHackMe --- AI Security Path & Defending Azure

tryhackme.com/p/Student98

- Practiced **LLM prompt injection**, adversarial ML, and insecure output handling mapped to **OWASP LLM Top 10**; built detection logic for AI-specific threats extending MITRE ATT&CK to ML attack surfaces
- Completing **Defending Azure** path — hands-on Microsoft Sentinel KQL detection, Defender for Endpoint EDR investigation, and Entra ID identity threat analysis in a cloud-native environment
- Developed awareness of **AI supply chain vulnerabilities** and defensive controls aligned to CIS Controls v8 — applicable to emerging threat detection in financial sector security operations

EDUCATION & CERTIFICATIONS

Master of Science in Cybersecurity & Networks

Jan 2024 – **Expected May 2026**

University of New Haven, West Haven, CT

CompTIA Security+ (Active) | **Google Cybersecurity Professional Certificate** | **SC-900** Microsoft Security Fundamentals — In Progress

TryHackMe: Defending Azure Path | SOC Level 1 Path | AI Security Path

ADDITIONAL INFORMATION

Work Authorization: Authorized to work in the U.S. on OPT — no sponsorship required | **Availability:** Open to on-site and hybrid roles
