Summary

Security Analyst graduate student with hands-on experience implementing and validating security controls through a self-directed SOC lab and prior cybersecurity internship. Designed Splunk-based detections integrating Sysmon and Snort to analyze 10,000+ events and assess control effectiveness mapped to MITRE ATT&CK and D3FEND. CompTIA Security+ certified with strong fundamentals in SIEM operations, log analysis, scripting (Python), and NIST-aligned security practices. Detail-oriented team player seeking to support risk management, control testing, and secure system design in a collaborative environment.

Education

University of New Haven, West Haven, CT

Jan 2024 – May 2026

Master of Science in Cybersecurity & Networks

Experience

Cybersecurity Intern, Police Station, India

Nov 2022 – Aug 2023

- Assisted in cybercrime investigations by collecting and analyzing system logs, digital evidence, and incident artifacts to support case resolution.
- Conducted OSINT and threat intelligence research to identify Indicators of Compromise (IoCs) and assess potential risk.
- Supported monitoring of network and endpoint activity, helping validate effectiveness of existing security controls.
- Contributed to incident documentation and reporting to improve audit readiness and compliance tracking.
- Helped develop and refine internal security procedures aligned with best practices and policy requirements.

Projects

Threat-Informed SOC Dashboard using Splunk, Snort, and Sysmon (MITRE ATT&CK + D3FEND)

- Designed and deployed a virtual SOC lab integrating Splunk SIEM, Sysmon endpoint telemetry, and Snort IDS to assess detection and monitoring controls across Windows and Linux systems.
- Simulated adversary techniques and analyzed 10,000+ security events to validate control effectiveness and incident detection workflows.
- Engineered 26 custom detection rules mapped to MITRE ATT&CK and enriched with D3FEND to provide actionable defensive guidance.
- Built dashboards to support alert triage, prioritization, and incident context, improving analyst decision-making.
- Correlated network and host logs to identify attack paths and reduce false positives through tuning and asset context.
- Automated log parsing and reporting using Python (pandas) to generate summarized findings for review and documentation.
- Documented SOC procedures, detection logic, and response steps, mirroring real-world control testing and audit support.

Skills

Security: SIEM Operations, IDS/IPS, Incident Detection, Alert Triage, Threat Hunting, IoC Analysis, Vulnerability Basics, Security Controls Testing, Risk Awareness

Tools: Splunk, Snort, Sysmon, Wireshark, Nmap

Operating Systems: Windows, Linux

Networking: TCP/IP, OSI Model, Ports, Traffic Analysis

Programming/Scripting: Python (automation, log parsing), Bash (basic), C (basics)

Frameworks: MITRE ATT&CK, MITRE D3FEND, NIST CSF/800-53 (familiar), CIS, OWASP Top 10

Soft Skills: Communication, Technical Documentation, Teamwork, Attention to Detail, Problem Solving

Certifications

CompTIA Security+
