

VAMSHI RAMAVATH

Cybersecurity Analyst

West Haven, CT • 216-694-8703 • vamshiramavath16@gmail.com • [LinkedIn](#) • [GitHub](#) • [TryHackMe](#)

Authorized to work in the U.S. (STEM OPT) — no sponsorship required

SUMMARY

Cybersecurity Analyst with 2+ years of hands-on SOC experience in incident response, threat hunting, and vulnerability management, leading multi-system investigations by correlating telemetry across endpoint, identity, email, cloud, and network sources. Uses AI/LLM assistants for log summarization, alert enrichment, and timeline development, validating outputs against source evidence to catch hallucinated or incomplete analysis. CompTIA Security+ certified.

EXPERIENCE

Co-op, Cybersecurity Analyst

Jan 2026 - Aug 2026

KGS Technology Group

- Performed 24x7 system monitoring across SOAR, XDR, SIEM, and EDR platforms as a frontline SOC responder, analyzing anomalies and alerts to determine what was real, triaging malware, phishing, spoofing, and email threats in Splunk, and escalating as needed
- Led root-cause analysis and multi-system investigations for 20-50 incidents per week using the MITRE ATT&CK framework, correlating telemetry across endpoint, network, and email channels to determine impact and required remediation, across DoS/DDoS, MITM, SQL injection, XSS, network scanning, and credential access attempts
- Performed log summarization and incident timeline development, validating findings against source evidence to ensure accuracy and completeness
- Hunted for threats across endpoint, network, and email telemetry using threat intelligence, surfacing IOCs and applying knowledge of adversary TTPs to accelerate escalation
- Investigated endpoint alerts across Windows, Linux, and macOS hosts using Microsoft Defender and EDR telemetry, supporting containment of confirmed compromises and reducing mean time to containment
- Partnered with network teams to review firewall, proxy, and network segmentation configurations, applying least-privilege and defense-in-depth principles aligned with Zero Trust

Cybersecurity Analyst

Aug 2022 - Dec 2023

SVS Enterprises

- Triaged 24x7 security incidents across endpoints, firewalls, IDS/IPS, VPN, and email channels using SIEM tools such as Splunk and Microsoft Sentinel, meeting 15-30 minute SLA targets
- Processed 50-100 alerts per shift, containing 10-15 phishing emails per week through OSINT and phishing/malware analysis, blocking malicious URLs and remediating affected endpoints
- Owled 10-20 P3/P4 incidents weekly from triage through closure, producing detailed ticketing, customer-facing reports, and hand-off documentation, plus support for P1/P2 escalations
- Performed forensic analysis and protocol-level auditing of SSH, SSL/TLS, HTTPS, and SMTP traffic, correlating threat indicators across endpoint, network, and email telemetry to identify intrusions and escalate per SOPs and playbooks

PROJECTS

Domain Controller Compromise & Credential Reuse Lab

Ethical Hacking Coursework

- Performed a full-scope penetration test against a segmented Active Directory environment, using Nmap to identify a Domain Controller vulnerable to EternalBlue (CVE-2017-0144, CVSS v3.0 9.8 Critical), exploited it with Metasploit for SYSTEM-level remote code execution, and escalated access via RDP/WinRM using cracked credentials
- Authored a formal penetration test report with CVSS-based risk scoring, business impact analysis, and remediation guidance for each finding

Threat-Informed SOC Monitoring Lab

GitHub

- Designed a 3-tier SOC lab (Kali attacker, Windows/Sysmon victim, Ubuntu Splunk + Snort IDS) and authored 26 custom Snort rules mapped to 8 MITRE ATT&CK/D3FEND techniques, achieving an 85% true-positive rate and reducing false positives by 40% through iterative tuning
- Implemented endpoint detection logic and Python scripting for automation and alerting

Office 365 Credential Harvesting Phishing Investigation

GitHub

- Conducted digital forensics on a real-world O365 credential-harvesting campaign, tracing a redirect chain through URLScan.io and mapping the attack to MITRE ATT&CK T1566.001, owning the investigation from detection through remediation

TECHNICAL SKILLS

Security Operations & SIEM: SOC, NOC, Splunk, Microsoft Sentinel, SOAR, XDR, EDR, Microsoft Defender, MITRE ATT&CK & D3FEND, Incident Response, Threat Hunting, Root-Cause Analysis

Networking & Protocols: TCP/IP, HTTP, HTTPS, SSH, DNS, SSL/TLS, SMTP, VPN, NAT, DHCP, Firewalls, Network Segmentation, Zero Trust

Systems & Cloud: Windows, Linux, macOS, Azure, Active Directory, Microsoft Entra ID

Vulnerability Management & Tools: Nessus, Qualys, Metasploit, Burp Suite, Wireshark, Snort, CVE-Based Risk Prioritisation

Automation & AI: Python, Bash, PowerShell, Log Analysis & Alert Triage

CERTIFICATIONS

CompTIA Security+ (Active) • Blue Team Level 1 (BTL1) - In Progress • CCNA - In Progress • TryHackMe Azure Cloud Security Fundamentals

EDUCATION

Master of Science in Cybersecurity & Networks

Jan 2024 - May 2026

University of New Haven, West Haven, CT

Bachelor of Technology in Information Technology

Graduated May 2022

SIET, JNTUH
